PROFILE

Offensive security researcher and bug bounty hunter with six years on HackerOne: **top-1,000 all-time** (rank #747), **HackerOne Clear**, and **185 valid reports** (105 resolved) across 75 programs — **131 of them paid, 57 rated critical or high**. Most of the work sits in 32 private, invitation-only programs, including one where I rank #1 of every hunter on it. Publicly credited by **Apple** (three times), **Google**, **Microsoft**, **Goldman Sachs**, **SpaceX** and **GitHub**. I work AI-augmented: harnesses I built around Claude and Codex run reconnaissance, triage and reporting at a scale one hunter couldn't reach by hand.

EDUCATION

Higher Secondary Certificate

<i>Ispahani Public School & College</i> [01/07/2017 – 01/06/2020]	SCIENCE	GPA 5.00
Cumilla Cantonment, Cumilla		

Secondary School Certificate

<i>Miah Bazar Latifunnesa High School</i> [01/01/2016 – 30/03/2017]	SCIENCE	GPA 5.00
Miah Bazar, Chaudhagram, Cumilla		

Penetration Testing Courses

Udemy, Coursera, YouTube, online platforms [01/01/2020 – current]

- Networking, Linux, OWASP Top 10, API security; Bash, Python, Rust, Git, GitHub, Notion
- Reconnaissance, attack surface management, web application hacking; database management; cloud (Amazon, Google, Microsoft)
- Leadership and team management; organisation and effective time management

PROFESSIONAL EXPERIENCE

Bug Bounty Hunter [HackerOne](#), [Bugcrowd](#), Intigriti | Remote | 2020 – Present

- **185 valid reports** (105 resolved, 80 triaged) across **75 HackerOne programs**; **131 paid bounties** from 36 programs; **57 findings rated critical or high** (27 critical). Rank #747 all-time, signal in the 80th percentile, impact in the 84th; HackerOne Clear; nine-month valid-report streak (Jan – Sep 2026); Community Milestone Level III; 18 badges.
- Vulnerability classes on record: injection, broken authentication, XML external entities, broken access control, security misconfiguration and cross-site scripting — each confirmed by HackerOne's own badge — plus sensitive data exposure, server-side request forgery, open redirect and insecure-design flaws.
- Public acknowledgements: **Apple** (web server security — February 2026, August 2025, July 2025), **Goldman Sachs** (two bounties, 2026), **GitHub** (Security Researcher, 2021), **Adobe** (five valid reports), **UNESCO** (reflected XSS, June 2025), **Deutsche Telekom** (SSRF), **Achmea** (2022–23), **ShopClues** (2023); hall of fame at **Google**, **Microsoft**, **Samsung**, **Accenture** and the **Dutch government**.
- Public programs include **PayPal**, **Palantir**, **Databricks**, **Spotify**, **Roblox**, **UPS**, **Xiaomi**, **AT&T**, **Kubernetes**, **Epic Games**, **Polygon**, **Hilton**, **Hyatt**, **Veeam**, **Stellar** and the **U.S. GSA**. Bugcrowd hall of fame (64 valid findings) at **SpaceX/Starlink**, **Atlassian**, **Twilio**, **Bitdefender**, **Coca-Cola**, **United Airlines**, **Lenovo**, **Ibotta**, **Monash University** and the **U.S. Department of Veterans Affairs**.
- 82% of reputation earned in 32 private, invitation-only programs — **#1 of every hunter** on one of them (48 valid reports, 1,075 reputation). Private programs are not named, as their terms require.

- **AI-augmented pentesting:** personal harnesses built around **Claude** and **Codex** run reconnaissance, triage, proof-of-concept drafting and reporting, with every exploitation step steered by me.

A W A R D S

Security Researcher

- * Top-1,000 all-time on [HackerOne](#) (rank #747) · HackerOne Clear (background-checked) · Community Milestone Level III (2025–26)
- * Top 10 Hackers on the HackerOne Bangladeshi leaderboard (2021–2024)
- * [GitHub](#) Security Researcher badge
- * Received invitation to the Microsoft Security Conference 2024–2025
- * Received swag from John Deere, Achmea, Microsoft and GitHub for responsible disclosure

D E V E L O P M E N T E X P E R I E N C E

Developer 2022 – Present

- Designed an enterprise-grade **Attack Surface Monitoring** solution as a scalable **SaaS** application (in development), folding Crunchbase, Shodan, Censys, Whoxy and crt.sh into one continuous picture of an organisation's attack surface with custom reconnaissance on top — built to connect security researchers with businesses for penetration testing, red teaming and vulnerability hunting.
- **qshodan** (Rust, open source) — extracts hosts from Shodan and defeats its 1,000-result ceiling by recursively subdividing the search (country, city, port) until every bucket fits; validates, strips reserved ranges, deduplicates. github.com/Twistedmock/qshodan
- **qport** (Rust, open source) — port discovery from Shodan's InternetDB at ~500 requests a second, so an entire estate can be mapped without a packet reaching the asset owner. github.com/Twistedmock/qport
- Custom workflows and tools in **Bash**, **Python** and **Rust** for reconnaissance, attack surface monitoring, mass vulnerability detection and exploitation, and the **Claude / Codex agent harnesses** wired to them.

P E R S O N A L E X P E R I E N C E

Personal/Other

- Languages: **English** — fluent (IELTS Academic 8.0, 2024); **Bengali** — native; **Hindi** and **Urdu** — conversational (speaking and listening).
- Passionately engaged with APON, a volunteer organisation, by leading outreach programmes, regularly donating blood and fundraising to support the poor, sick and marginalised in our community.
- Led a team of 25 people under APON for elder caregivers that turned into an established social business solving a local social challenge alongside unemployment.

H O B B I E S / I N T E R E S T S

- Enjoy nurturing indoor plants and spending time in nature.
- Fond of cats, pigeons and birds.
- Enjoy swimming, hiking, cycling and working out at the gym.
- Love reading books and watching films.
